

Zoom-Type Information for Schools

Problems

Touch-typing is taught far too late, and takes far too long to learn. Research shows that kids benefit academically from using the computer at an early age, but the stumbling block remains that their typing skills lag far behind.

Today's "new" computer typing programs are essentially old approaches with gimmicks. In addition, many of these programs attempt too much, requiring reading or word processing skills along with typing. This bogs down the learning process and produces students who *still* do not know how to touch-type, much less do it rapidly. Speed-keyboarding is the missing skill. It alone boosts productivity for a lifetime.

New Idea

ZOOM-TYPE is radically different. It yields fast, solid results. **ZOOM-TYPE** is a powerful breakthrough in teaching touch-typing using the right brain as well as the left. In contrast to old approaches where letters are acquired gradually, one at a time, **ZOOM-TYPE** enlists the right brain to take repeated pictures of the entire keyboard every time. Letters appear and disappear all over the simulated keyboard (on the pages of the book, not on an actual computer), forcing the mind to recall what was seen and where. The musical finger march trains the fingers to advance plan and to automate the movements needed in actual typing.

Success

With the **Zoom-TYPE** method, touch-typing is fully imprinted in the autonomic nervous system and functions as a natural reflex, in just five days. It tackles the job of learning to touch-type *fast*. *It is portable which means classes don't have to wait for scheduled lab time, or have to work on actual computers, just to learn to type. They can learn at their desks or outside under a tree.* During subsequent weeks, keyboarding speed soars through concentrated one-minute typing contests.

Cost

An entire classroom set costs far less than even one computer. Use the computer labs for actual computer work, not for learning how to type!

A classroom kit includes one **ZOOM-TYPE** book per student, and one audio CD per class. The discounted cost (including the one classroom audio CD) is \$17.00 per book, for a minimum class size of 15. (Individual regular retail is \$29.95 per book, for non-school orders)

**This *sure* investment can put the "skill of the future"
into the hands of all your students.**

Touch type fast using Zoom Type! Learn it in just 5 days.

Away with stress. Away with mess. Away with writing fatigue.

Start touch-typing today!

Learn on the go...

in the car, on a plane, in the park.

Totally portable.

No computer keyboard necessary.

Nearly effortless.

The pictures keep working on you overnight.

The letters appear and disappear...

Now you see them, now you don't!

You'll "finger-tap" your way through fast-changing-snapshots right on the pages of this book!

When you SEE them . . . All you do is,

1) TAP the letters with the correct fingers

and,

2) SAY the letters out LOUD as you tap.

When you DON'T SEE them...

You tap and say out LOUD what you remember they were!

That's all there is to it. That's it, folks!

Why poke around any longer? Learn the easy way.

Begin today.

This typing program is truly an inspired method of teaching. My students took to it like fish to water. My second graders were typing within a week. It's incredible!
